TITLE : COMPUTER COMMUNICATION SYSTEM

ABSTRACT : PURPOSE: To pick trace data in time at the time of the occurrence of an arbitrary event by setting a trace condition from an arbitrary terminal equipment to pick trace data and to stop picking in the terminal equipment.

CONSTITUTION: A trace data picking means 24 accepts a trace data picking request from a trace condition setting means 25 to write trace data in a trace buffer 22 and reports a trace data transfer request to a trace data transfer means 21. The trace data transfer means 21 accepts a trace data transfer condition from a trace stopping means 23 or a trace data picking means 24 and stops transfer of trace data in response to a trace data transfer stop request and to transfer trace data in the trace buffer 22 to computer system 10 in response to a trace data transfer request. Thus, trace data is picked in time at the time of the occurrence of an arbitrary event.
